Response to Amendment

1. Applicant's response received on June 6, 2007 has been fully considered and entered, but the arguments are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 6-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Zhang et al. (US Patent Application Publication no. 2002/0010938 A1).

Regarding claim 6, Zhang discloses a bit rate control apparatus comprising a pre-encoding unit for receiving a video stream and initializing a buffer required for coding (See [0026, lines 8-14]); an encoding unit for inter-coding and intra-coding the received video stream (See [0124], lines 6-12)); a post-encoding unit for updating the buffer based on the coded video data and adjusting a bit rate by controlling frame-skip (See [0124], lines 12-16, [0125], lines 1-12, and [0126]); a time instant update unit for receiving a next frame (See fig. 9, item 960 and [0126]); and a determination unit for determining whether or not the received frame is a first video object plane (See [0112]).

Art Unit: 2621

As per claim 7, Zhang further provides in fig. 9 an initialization unit for allocating a memory to a rate distortion buffer in which an encoded bitstream to be transmitted to a decoder is stored (See fig. 9, item 932); a quantization parameter estimation unit for estimating a quantization parameter for encoding, using a predetermined organized network (See fig. 9, item 934); a target estimation unit for estimating an amount of bits to be allocated to an inputted frame according to a state of the rate distortion buffer (See fig. 9, item 912); and a joint buffer control unit for modifying the rate distortion buffer in consideration of the structure of the network and the target estimation result (See Fig. 9, item 914).

4. Claim 8 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Claims 1-5 and 9-13 are allowed.
